EDUCATION

Canara Engineering College

Bachelor of Engineering in Computer Science

Mangalore, Karnataka

2023 – Present (8.87 CGPA)

S V Pre-University College

Pre-university course-PCMC

Gangolli, Karnataka

2021 – 2023 (92.5%)

TECHNICAL SKILLS

Languages:	Java, JavaScript, C
Backend:	Express.JS, Node.js
Frontend:	ReactJs, HTML5, CSS3, Tailwind CSS
Database:	MySQL, MongoDB
Cloud & Devops:	AWS(EC2)
Developer Tools:	VS Code, Github

PROJECTS

Placement Pro | *HTML5, CSS3, Vanilla JavaScript, Node.js, Express.js, MongoDB, Socket.io* 2026

- Built a single platform where students register, browse job postings, and track applications, cutting the placement cell's manual coordination work by replacing spreadsheets entirely.
- Added instant Socket.io notifications so students get real-time updates the moment a job is posted or their application status changes — no more missed deadlines from checking email late.
- Automated resume and offer-letter generation (PDFKit/Puppeteer), saving placement staff from manually formatting and issuing dozens of documents per hiring cycle.

Real-Time Disaster Alert System | *HTML, CSS, JavaScript, Node.js, SQLite* 2025

- Let citizens report incidents in seconds with a photo and live GPS location, cutting the reporting time from a phone call (several minutes) down to a quick form submission.
- Auto-converted raw GPS coordinates into readable addresses, so responders get an actionable location instantly instead of decoding latitude/longitude by hand.
- Gave admins a dashboard to verify and prioritize incoming reports, so genuine emergencies don't get lost in a pile of unverified submissions.

Smart Warehouse Management System | *HTML, CSS, Postgres SQL, Express.js, Node JS* 2025

- Centralized inventory tracking so managers see stock levels and movement in one place instead of cross-checking physical logs.
- Built a real-time dashboard that flags low stock and movement trends immediately, enabling faster restocking decisions instead of periodic manual audits.
- Used PostgreSQL for consistent, structured inventory records — reducing the data-entry errors common with spreadsheet-based tracking.

ACHIEVEMENTS AND HACKATHON EXPERIENCE

- **SOLVE-A-THON 1.0 (2026):** National-Level 24-Hour Hackathon: Competed among national-level participants at Srinivas Institute of Technology, Mangaluru, building a working prototype under a 24-hour deadline.
- **CEATHERION (2025):** 24-Hour Hackathon, Canara Engineering College: Collaborated with a randomly assigned cross-year team to design and deliver a solution within a fixed time constraint.
- **TechNovate (2024):** First-Year Engineering Symposium, Canara Engineering College: Participated in a technical symposium focused on exploration, discovery, and innovation in engineering.

COURSES & CERTIFICATIONS

- **Google Cloud Skill Badges(Google Cloud Arcade):** First-Year Earned completion badges in MLOps with Vertex AI (Model Evaluation) and MLOps for Generative AI, building hands-on experience deploying and evaluating ML models on Google Cloud's Vertex AI platform.
